

WHAT IS SUSTAINABLE DEVELOPMENT?

Long Island developed without adequate planning, leaving an aftermath of suburban sprawl, fragmented transportation systems, depleting natural resources, segregated neighborhoods and schools, and deteriorating downtowns. Attempts were made to address these problems individually, without regard to the interrelationship of the issues. As a result, yesterday's "solutions" became the root of today's problems.

Sustainable Development is the answer to these accumulated problems. Sustainable Development is a new way of thinking, moving from problem solving that addresses one issue at a time to solutions derived from integrative decision making. This approach, incorporating ecological integrity, economic stability and social equity, isn't idealistic rhetoric. Across the nation, businesses, municipalities and communities are implementing practical and profitable sustainable solutions.

Join large and small business owners, municipal officials, community leaders, architects, developers and all Long Islanders who have a stake in a sustainable future for our region. Be a part of the conversation to "rethink, renew, and rebuild" Long Island.

schedule

8:30am – 4:00pm

Vendor exhibits open

8:30 – 9:30am

Registration and breakfast in vendor hall

9:30 – 10:30am

Opening Plenary: Identifying the Regional Agenda
Ann Golub, Long Island Index, Rauch Foundation

10:45 – 11:45am

Workshops

12:00 – 1:30pm

Lunch: Exciting Sustainable Solutions

Keynote Speaker: Julius Walls, President and CEO, Greyston Bakery

1:45 – 2:45pm

Workshops

3:00 – 4:00pm

Closing Plenary: Identifying Long Island Solutions

Suffolk County Executive Steve Levy

Nassau County Executive Thomas Suozzi

directions

BY CAR

Take the Long Island Expressway (I-495) to exit 62 north (Nicolls Road, also called CR97), and follow Nicolls Road (Route 97) north for 9 miles. The main entrance to the University is on the left. Upon turning into the main entrance, turn right at the first light onto Circle Road and make an immediate left onto John S. Toll Drive. Follow signs to Sustainable Long Island Conference parking lot. Follow the path at the back of the parking lot to the Student Activities Center.

BY TRAIN

Take the Long Island Railroad's Port Jefferson line to Stony Brook. The LIRR station is at the north end of the campus; bus service to the central campus is provided.

All workshops will be offered in both sessions.

A. SUSTAINABLE BUSINESS IS SMART BUSINESS

To have happy and engaged employees, committed customers and to thrive in a robust community – it's the profile every company wants, but what's the formula for attaining it? Companies are increasingly aware that building and sustaining such a profile requires that they actively nurture the health and well-being of their social and environmental marketplace. They are discovering that what a company does and the commercial achievement it yields are no longer the sole measures for success. Success is also determined by how businesses operate. Whether under the banner of Corporate Social Responsibility, or simply smart business, savvy companies are looking closely at their obligations as they relate to consumers, customers and shareholders to determine whether their behavior respects, nurtures and enhances the very relationships that help sustain them.

This panel will examine issues related to sustainable business practices, including:

- Creating employee friendly work environments (family friendly policies, eco-friendly offices, flex time and more)
- Investing in the community
- Improving the environment
- Demonstrating strong ethics and operating with integrity
- Leveraging the talents of a diverse workforce

Moderator: Deidra Parrish Williams, Community Affairs Manager, Newsday

B. GOING GREEN: SUSTAINABLE DESIGN

Green design is a win-win for employers, employees and the environment. It creates a healthy and comfortable workplace; increases worker productivity; lowers energy and other operating costs; and improves your bottom line. You can incorporate green design elements into your business in a variety of ways, from simple changes such as switching to compact fluorescent light bulbs to more holistic changes, including the use of solar panels, day lighting and eco-friendly materials. In this workshop, you'll learn how green design makes sense for your business, and discover the steps you can take to go green.

This panel will examine issues related to green design, including:

- Design and Architecture
- Materials/Elements of Design
- Economic Benefits

Moderator: Russell Albanese, Albanese Organization, Inc.

C. SUSTAINABLE ENERGY FOR A SUSTAINABLE LONG ISLAND

The rising cost of energy is wreaking havoc on businesses and home owners alike. And the impacts aren't just financial: Our addiction to fossil fuels is dangerous to our health and a threat to our national security. Global warming is no longer the stuff of debate, but scientific certainty. As supplies decrease and prices increase, Long Islanders will need to find new ways to meet energy demands by becoming more energy independent and less reliant on oil and other fossil fuels. How do we provide cleaner, safer energy to fill our growing energy demands while preserving open space and protecting our already compromised air quality? How can we create a sustainable energy future for Long Island and reduce our energy footprint on the planet?

This panel will examine issues related to energy, including:

- State of Long Island's current energy consumption and sources
- Future of Long Island's energy: integrating renewable energy sources
- Economic, environmental and health impacts

Moderator: Gordian Raacke, Executive Director, Renewable Energy Long Island

D. CREATING SUSTAINABLE COMMUNITIES: BUSINESS AND GOVERNMENT WORKING TOGETHER

Sustainability makes economic sense. The future of our economy is dependent on revitalizing our depressed downtowns, creating infrastructure improvements for redevelopment and finding housing alternatives that include a variety of housing options. To address these concerns, we must look toward practical solutions that involve local government, business and the community working together. Government and business must begin a dialogue on potential municipal policies and initiatives to support sustainable business practices. In this workshop, we'll take a look at successful strategies in regions similar to Long Island, and discover what we can do to create real change here.

This panel will examine issues related to the roles of business and government in creating sustainable communities, including:

- Downtown revitalization (smart growth)
- Infrastructure improvements (transportation, sewers, etc.)
- Housing alternatives

Moderator: Honorable Steve Bellone, Supervisor, Town of Babylon

sponsorship opportunities

SUSTAINER LEVEL \$15,000 - SOLD!!

- Corporate name & logo on directory
- Full page back cover ad in directory
- Premium exhibit space
- Sponsor of 2 workshops
- 20 tickets to conference & luncheon
- Podium recognition at luncheon
- Pre and post-event publicity & signage

VISIONARY LEVEL \$10,000

- Full page black & white ad in directory
- Premium exhibit space
- 10 tickets to conference & luncheon
- Workshop sponsor
- Pre & post-event publicity & signage

LEADER LEVEL \$7,500

- Full page black & white ad in directory
